Tutorial Group: TC18

Introduction

Our planet is facing serious [environmental challenges](#) such as deforestation, climate change, and wildlife extinction. To solve all these problems, an effort needs to be made for us to have a more sustainable future. One of the effective ways to do so is to volunteer with [World Wildlife Fund](#). Ever since I was young, I have been amazed by animals while visiting the Zoo. I had been watching documentaries about animals with my father, which showed me the beauty of nature and the animals. WWF focuses on protecting endangered species, promoting sustainability, and restoring ecosystems. As a youth passionate about making a positive impact, I would choose to volunteer with WWF. In this article, I will share three main reasons for my choice: protecting endangered species, promoting environmental education, and restoring natural habitats.

Discussion

Protecting endangered species worldwide

To begin with, World Wildlife Fund focuses on conserving animals that are at risk of extinction, such as tigers and pandas. The wild tiger population has increased due to efforts of anti-poaching patrols and restoring habitats. Local communities across Asia have also worked with them in preserving animals and their habitat. This can ensure the sustainability of conservation initiatives. [In 2010](#), the 13 countries tied to the TX2 initiative aimed to double the wild tiger population. This was deemed successful by 2023, as there was a 74% increase since the initiative began. [Vietnam](#) was also involved in preventing the illegal trade of tigers to further help them from extinction. Criminals who do so face an imprisonment of up to 15 years. This further reassures me that every animal is safe on earth in their safe habitats and their efforts impacted me deeply.

Promoting Environmental Education and Awareness

In addition to protecting species, it is important to spread awareness as it educates people on the planet and what actions they can take to contribute. [Earth Hour](#) is a global campaign run by WWF, which is held on the last Saturday of March each year. This year, it occurred on March 22nd. The lights will go off from 8.30 PM to 9.30 PM local time. They also run [school programmes](#) to teach youths about sustainability. This can inspire them to take a step towards sustainability. When I was in secondary school, there were discussions about environmental topics like climate change during morning assemblies. This was an eye-opener for me and encouraged me to play my part, as I came to understand how the world is being negatively affected, which motivated me to make a difference.

Restoring Forests and Natural Habitats

Lastly, forests are crucial for our planet's health. WWF is restoring the forests regularly by replanting trees and protecting natural habitats. One example is the [Trillion Trees Initiative](#), which is a global mission led by WWF to restore one trillion trees by the year 2050. In 2023, [the Usambara Mountains, Tanzania](#), 77,500 trees were grown as part of the initiative, and it benefited 1,319 people. Restoring rainforests is a strong move to fight climate change and to protect wildlife. The forests house many species. If I volunteered with WWF, I would enjoy taking part in reforestation projects in Southeast Asia. WWF's reforestation efforts led me to a better understanding and appreciation of forests as cutting down trees can lead to various harms, and it is important that we replant them.

Conclusion

Volunteering with WWF would be a meaningful experience for me as I can help protect endangered species, promote environmental education and awareness, and also restore forests and natural habitats. I believe that if more youths are involved in these efforts for sustainability, our future will have a more positive attitude towards nature. To find out more about volunteering with WWF, join the TP Talks seminar series Thursday, 7 August 2025, at 11am in TP's Classroom 03-08-28.
